- There is an html page called rankingTool
- Open the html page with chrome

3. Requirement

- Computer
- Internet Connection (to get Google JQuery files.

4. Technologies Used

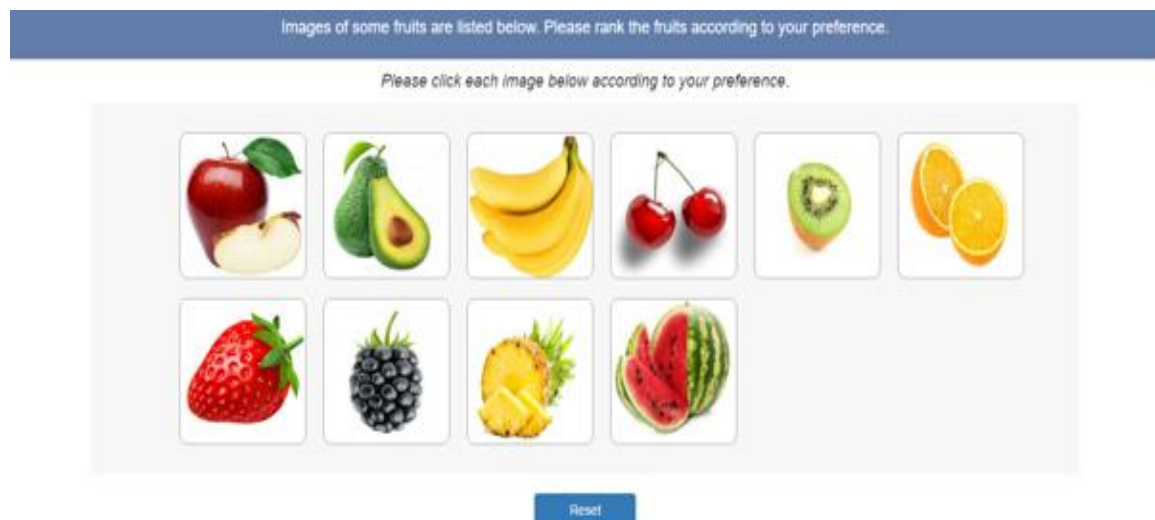

- Html5
- CSS3
- JavaScript
- JQuery
- Bootstrap
- Dreamweaver (IDE)

5. Description

It is a tool for selecting the items according your preference by clicking on the image

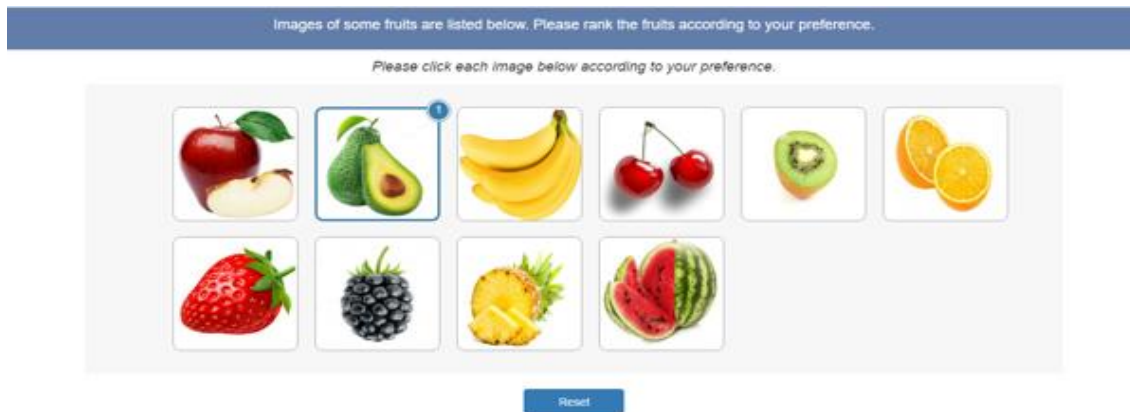

- Landing page look like this

=> There are 10 images in which you can select top three.

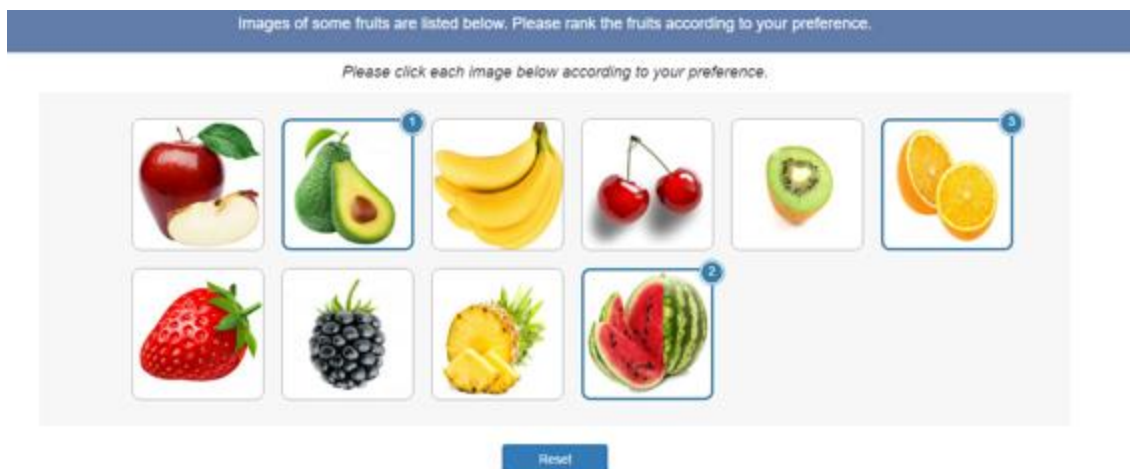

=> When you click on an image, it is considered as your first preference.

=> To indicate that a number is shown on the top of the image when you click it as shown below

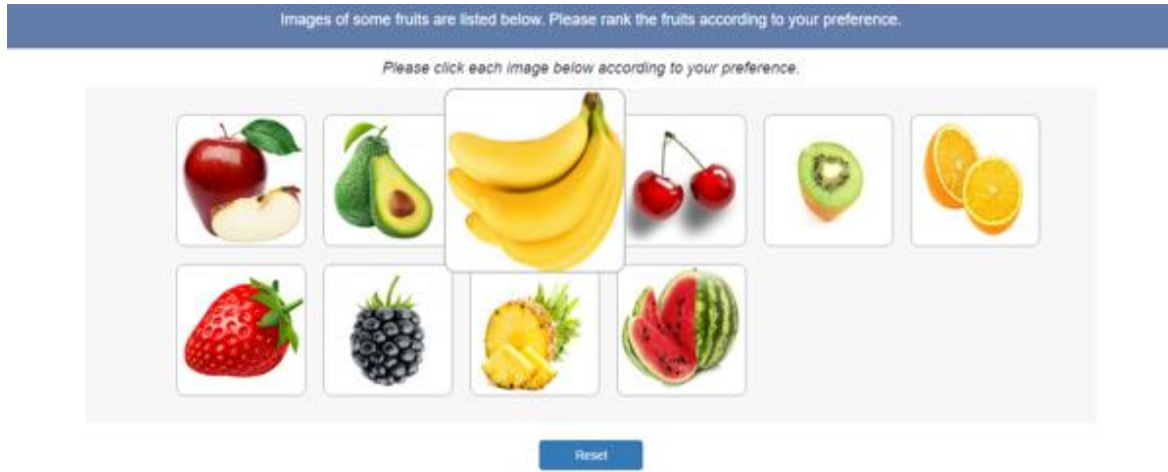

=> Top 3 preferences can be given. The images get numbered according to that as shown below

=> You can refresh the screen by clicking the reset button

=> When you place mouse over any image it will get zoomed as shown below

=> Images can be zoomed even after ranking as shown below

Test Cases

1. Test all elements are aligned as shown in the main screenshot.
2. Check whether the images get zoomed when mouse pointer brings over the image.
3. Check whether a number with a highlighting border is appearing on the image while clicking on the image.
4. Make sure that not more than one ranking possible on the same image.
5. Check whether the number gets incremented on every click.
6. Make sure only three ranking possible.
7. Check whether images get zoomed when hovered, even after ranking.
8. Check whether no number is coming on the image while clicking it after three ranking.
9. Check whether the page get refreshed on reset button click.
